Huiming, W., "Treatment of Infantile Pneumonia and Bronchitis with Reflexotherapy." 2002 China Reflexology Symposium Report, Beijing, China Reflexology Association, pages 12-13.

**Synopsis:**

A total of 211 cases were treated in 3 groups. A Reflexotherapy group of 103 cases was set, together with a Western Medicine group of 40 cases, and a combined Western-Chinese Medicine group of 68 cases, to study the therapeutic effects of reflexotherapy for treatment of Infantile Pneumonia and Bronchitis.

**Conclusion:**

The average number of days for healing in the reflexotherapy group was 11.2 compared to the Combined group of 14.7 days and the Western Medicine group at 21.8 days.
