Synopsis:

A 7 week old baby boy vomiting 2 days after birth, vomiting milk 7-8 times a day, with hiccups, distended abdomen and having stools only every 3rd day was given foot reflexology. After first treatment, he had a stool, cried less and slept well. After the fifth, his symptoms disappeared and he had only occasional vomiting after feeding.

Conclusion:

Foot reflexology was found to be effective for the relief of neonatal vomiting.
